

How to Configure (Allowed/Restrict) IP Address in WAMP Apache (Step-by-Step)

1. Go to this folder:

C:\wamp64\bin\apache\apache2.x.x\conf\extra\

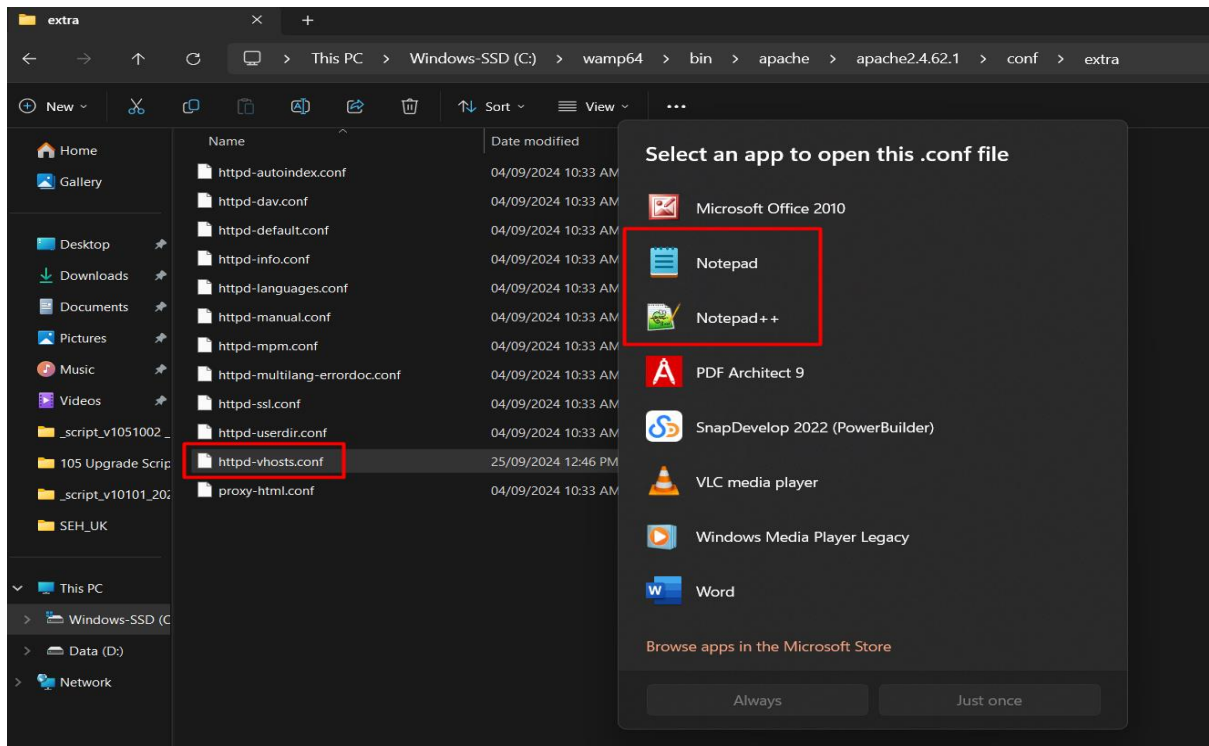

****(Note: apache2.x.x depends on your Apache version — it may vary (e.g., apache2.4.54, apache2.4.58, etc.)**

2. Open the file:

httpd-vhosts.conf

(Open With Notepad or Notepad++)

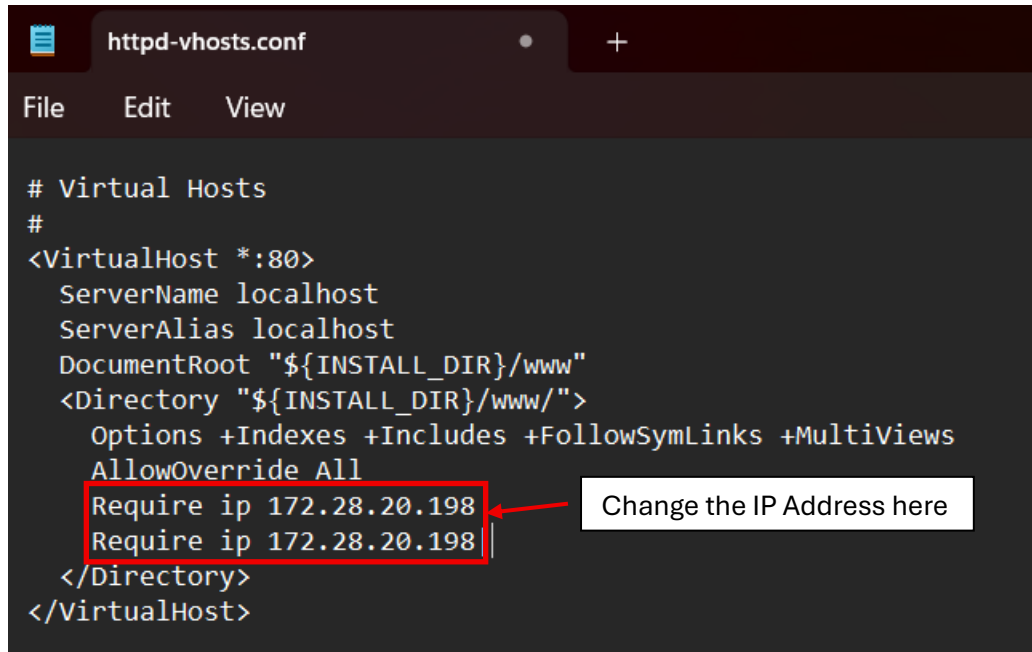

3. **Look for the line** that starts with:

Require ip ...

4. **Replace the old IP with the new one:**

Require ip <new IP>

(Or add multiple lines if needed)

```
# Virtual Hosts
#
<VirtualHost *:80>
    ServerName localhost
    ServerAlias localhost
    DocumentRoot "${INSTALL_DIR}/www"
    <Directory "${INSTALL_DIR}/www/">
        Options +Indexes +Includes +FollowSymLinks +MultiViews
        AllowOverride All
        Require ip 172.28.20.198
        Require ip 172.28.20.198
    </Directory>
</VirtualHost>
```

5. **Save the file**

6. **Restart Wamp:**

- Click WAMP icon in taskbar
**(If the icon is missing, please go to start, search Wamp and wait for the Wamp to start)
- Go to **Taskbar > Find Wamp > Restart All Service**
