

Site: LTL

Module: PR

Requirement 1

Both Competitive Basis and Non-Competitive Basis

When suppliers are selected using the RFQ button, the selected suppliers are currently automatically assigned to the corresponding supplier fields (Supplier 1, Supplier 2, Supplier 3, Supplier 4...) only for the selected row.

However, we need to modify this functionality so that the suppliers selected in the first row are automatically applied to all stock item rows within the same PR. Since the same suppliers are always selected for all PR lines, the selected Supplier 1, Supplier 2, Supplier 3, Supplier 4... from the first row should be automatically populated in the corresponding supplier fields for every stock item row. After that they will fill with quotation prices.

Requirement 2

Both Competitive Basis and Non-Competitive Basis

After quotation prices are entered, the system should automatically select the supplier offering the **lowest price** and populate the "**Supplier (Selected)**" column for each PR line.

If the user wants to select a supplier other than the automatically selected lowest-price supplier, the user should be able to **manually change the supplier** in the " **Supplier**"(**Selected**) column.

Hello, TOMMS
